

# basic-check Schweiz i-qbox e-Testing and LMS

The association basic-check Schweiz offers a standardized procedure for predetermining skills and talents and thus provides assistance in the trainee selection process. When performing the so-called "basic check", the i-qbox e-Testing tool offers the following support:

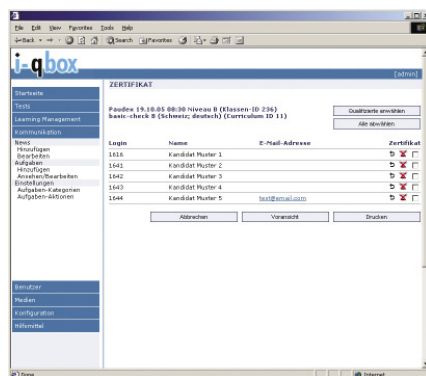

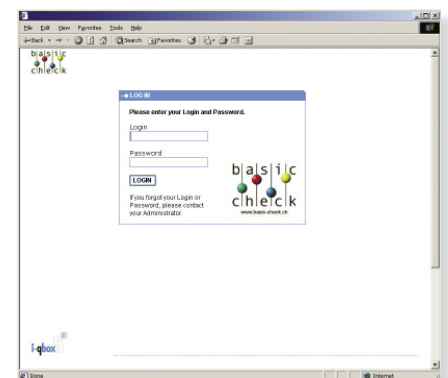

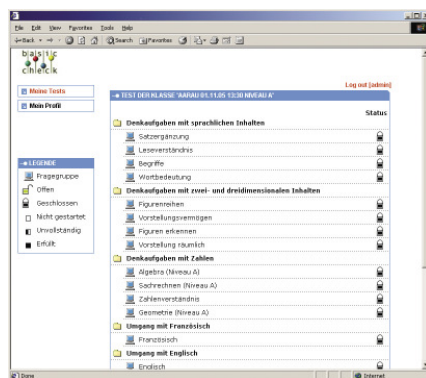

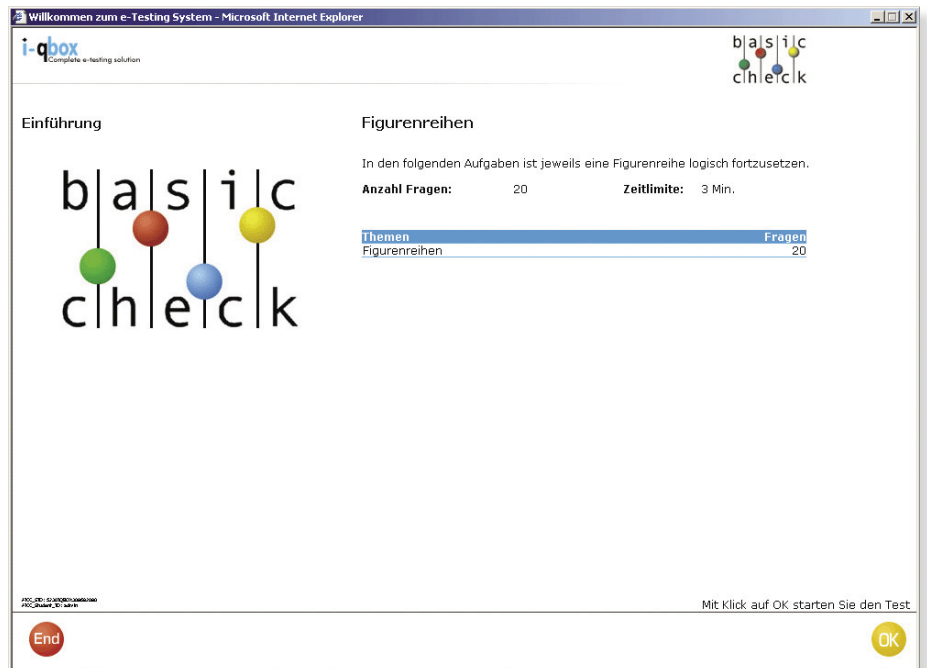

- Creation and administration of test questions
- Creation and administration of tests
- Web-based performance of basic checks (irrespective of time and place)
- Immediate analysis of test results including the calculation of quality criteria
- Immediate generation of a personal basic check evaluation/certificate

The evaluation forms the basis for location recommendations for students and companies offering trainee places. However, the basic check is no substitute for career counseling and other profession-specific tests.

**Target group:** Prospective trainees

**Language:** German, English, French

**Medium:** Internet
